

METHOD AND APPARATUS FOR CAP- TURING DEBRIS GENERATED FROM A PROCEDURE ON A HUMAN'S EXTREMI- TIES

Abstract

A method and apparatus for capturing debris generated from a procedure on a human's extremities having a support bar that can be removably secured to an item of furniture, a flexible frame secured to the support bar adapted to receive a disposable receptacle, and at least one receptacle placed upon or removably secured to the frame. Procedures include, but are not limited to, podiatry, manicure, and pedicure. Receptacles can be provided pre-loaded in cartridges. Receptacles can be mounted on freestanding support structures, such as a tripod, instead of being fastened to an item of furniture.
